Montana Board of Oil and Gas Conservation Environmental Assessment

Operator: <u>G3 Operating LLC</u>

Well Name/Number: Sorensen 1-34-27H Location: SW SE Section 34 T30N R56E County: Roosevelt, MT; Field (or Wildcat) Wildcat **Air Quality** (possible concerns) Long drilling time: No, 30-35 days drilling time. Unusually deep drilling (high horsepower rig): Triple derrick drilling rig to drill a single lateral horizontal Bakken Formation well, 19,260'MD/9,782'TVD. Possible H2S gas production: Slight chance H2S gas production. In/near Class I air quality area: No Class I air quality area nearby. Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under 75-2-211. Mitigation: _X Air quality permit (AQB review) X Gas plants/pipelines available for sour gas __ Special equipment/procedures requirements __ Other: Comments: Existing pipeline for H2S gas in the area. **Water Quality** (possible concerns) Salt/oil based mud: Yes to oil based invert drilling fluids for intermediate casing hole. Horizontal hole will be drilled with saltwater. Surface casing hole, freshwater, and freshwater mud system to be used. High water table: No high water table anticipated. Surface drainage leads to live water: Yes, closest drainages are ephemeral tributary drainages to Sheep Creek, about ¼ of a mile to the northwest, ¼ of a mile to the south and ½ of a mile to the west from this location. Within theses drainages are stock ponds. Water well contamination: No, closest water wells are about ¾ of a mile to the northeast and ¾ of a mile to the east northeast from this location. Depth of these stock and domestic water wells are from 37' to 140'. This well will be drilled with freshwater and freshwater mud to 2,000' and steel surface casing will be run and cemented to surface to protect groundwater. Porous/permeable soils: Yes, sandy silty soils. Class I stream drainage: No, Class I stream drainages. Mitigation: X Lined reserve pit X Adequate surface casing __ Berms/dykes, re-routed drainage __ Closed mud system __ Off-site disposal of solids/liquids (in approved facility) Comments: 2,000' surface casing will be drilled with freshwater, steel casing will be run to 2,000'

Soils/Vegetation/Land Use

and cemented back to surface. To protect freshwater zones in adjacent water wells. Also, covering Fox

Hills aquifer. Adequate surface casing and operational BOP equipment will prevent problems.

(possible concerns)

Steam crossings: None anticipated.

High erosion potential: No, location will require a small cut of up to 6.9' and small fill of up to 11.4', required.

Loss of soil productivity: No, location to be restored after drilling, if nonproductive. If productive unused portion of this drillsite will be reclaimed.

Unusually large wellsite: No, very large well site 381'X500'.

Damage to improvements: Slight surface use appears to be a hay field.

Conflict with existing land use/values: Slight

Mitigation

- __ Avoid improvements (topographic tolerance)
- __ Exception location requested
- X Stockpile topsoil
- __ Stream Crossing Permit (other agency review)
- X Reclaim unused part of wellsite if productive
- __ Special construction methods to enhance reclamation
- X Other Requires DEQ General Permit for Storm Water Discharge Associated with Construction Activity, under ARM 17.30.1102(28).

Comments: Access will be over an existing county road. New access road will be built into this location, about 369' off the existing county road into this location. Oil based invert drilling fluids will be recycled. Completion fluids will hauled to a commercial Class II disposal. Cuttings and solids will be buried/solidified(fly-ashed) on the well site in the lined reserve pit. The pit will be allowed to dry and the pit backfilled. No concerns.

Health Hazards/Noise

(possible concerns)

Proximity to public facilities/residences: <u>Residences about ¾ of a mile to the northeast, ¾ of a mile to the east northeast and 1.25 miles to the southeast from this location. The Town of Froid, MT about 3.6 miles to the northwest from this location.</u>

Possibility of H2S: Yes, slight.

Size of rig/length of drilling time: Triple drilling rig 30 to 35 days drilling time.

Mitigation:

- X Proper BOP equipment
- __ Topographic sound barriers
- __ H2S contingency and/or evacuation plan
- __ Special equipment/procedures requirements

__ Other:____

Comments: <u>Adequate surface casing cemented to surface with working BOP stack should mitigate any problems.</u>

Wildlife/recreation

(possible concerns)

Proximity to sensitive wildlife areas (DFWP identified): None identified.

Proximity to recreation sites: None identified.

Creation of new access to wildlife habitat: No

Conflict with game range/refuge management: No

Threatened or endangered Species: <u>Species identified as threatened or endangered are the Pallid Sturgeon</u>, Interior Lease Tern, Whooping Crane and Piping Plover. Candidate species is the Sprague's Pipit. NH tracker website indicates ten (10) species of concern. They are: Grasshopper Sparrow, <u>Sprague's Pipit</u>, Great Blue Heron, Burrowing Owl, Ferruginous Hawk, Chestnut-collared Longspur, <u>Sedge Wren</u>, Yellow Rail, Boblink and Whooping Crane. One (1) species identified as a "Potential Species of Concern" is the Eastern Screech-Owl.

Mitigation:
Avoidance (topographic tolerance/exception)
Other agency review (DFWP, federal agencies, DSL)
Screening/fencing of pits, drillsite
Other:
Comments: Private surface hay land. There maybe species of concern that maybe impacted by
this wellsite. We ask the operator to consult with the surface owner as to what he would like done, if a
species of concern is discovered at this location. The Board of Oil & Gas has no jurisdiction over private
surface lands.
Historical/Cultural/Paleontological
(possible concerns)
Proximity to known sites: None identified.
Mitigation
avoidance (topographic tolerance, location exception)
other agency review (SHPO, DSL, federal agencies)
Other:
Comments: Private surface hay land. There maybe possible historical/cultural/paleontological
sites that maybe impacted by this wellsite. We ask the operator to consult with the surface owner as to his
desires to preserve these sites or not, if they are found during construction of the wellsite. The Board of
Oil & Gas has no jurisdiction over private surface lands.
Social/Economic
(possible concerns)
Substantial effect on tax base
Create demand for new governmental services
Population increase or relocation
Comments: Wildcat well. No concerns
Remarks or Special Concerns for this site
Remarks of Special Concerns for this site
G3 Operating, LLC plans to drill a single lateral horizontal Bakken Formation wildcat well to
19,260'MD/9,782'TVD.
17,200 1112/7,102 1 1 21
Summary: Evaluation of Impacts and Cumulative effects
~
No long term impacts expected, some short term impacts will occur, but can be mitigated.
I conclude that the approval of the subject Notice of Intent to Drill (does/does not) constitute a major
action of state government significantly affecting the quality of the human environment, and (does/does
not) require the preparation of an environmental impact statement.
